DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-19 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-28 of U.S. Patent No. 6,719,356 in view of Schuttler (US Patent 5,450,933). US Patent No. 6,719,356 discloses a powered closure drive mechanism for a vehicle. US Patent 6,719,356 does not disclose that the strut includes a lock which prevents movement of the opposite ends of said strut relative to one another. Schuttler discloses a strut with the strut limitations of the application claims (see Schuttler Abstract). It would have been obvious to one of ordinary skill in the art at the time of the invention to include the locking details of the strut as taught by Schuttler. The motivation would have been to allow the strut and therefore the vehicle door to be locked in different positions.

3. Claims 1 and 10 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 8 of copending Application No. 10/674,004. Although the conflicting claims are not identical, they are not patentably distinct from each other because although 10/674,004 does not claim a dynamic property

detector, it does claim a controller which must get input from something. The Examiner takes Official Notice that it is well known in the art to use dynamic property detectors as inputs to a controller. Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to include a dynamic property detector as an input for the controller. Regarding the method, the method of operating the vehicle door with the strut would have been inherent to the vehicle door with the strut.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of record discloses other struts or other powered closure drive mechanisms.
